Overview

OFS offers AllWave *FLEX* Bend-Optimized Single-Mode Optical Fiber with a 200 µm coating diameter for use in cables with higher fiber counts per tube and in microcables where cable diameters must be minimized. The fibers offer all the other performance advantages and 30-year reliability of standard AllWave *FLEX* products.

Product Description

AllWave *FLEX* 200 µm Optical Fiber supports higher density and lower diameter cables, providing outstanding macrobend and microbend performance for Access, Fiber-to-the-Home (FTTH), enterprise networks, or any application where small bend diameters may be encountered. This G.657.A1 fiber maintains very low bending loss across the full usable spectrum of wavelengths from 1260 to 1625 nm. It can be coiled into a 20 mm diameter loop with < 0.5 dB incurred loss at 1625 nm and < 0.2 dB incurred loss at 1550 nm – five times better bending performance than conventional single-mode and leading LWP fibers.

Outstanding Macrobend Performance

- **100 turns on a 25 mm radius mandrel**
  < 0.01 dB @ 1550 nm
  < 0.05 dB @ 1625 nm
- **10 turns on a 15 mm radius mandrel**
  < 0.2 dB @ 1550 nm
  < 0.5 dB @ 1625 nm
- **1 turn on a 10 mm radius mandrel**
  < 0.2 dB @ 1550 nm
  < 0.5 dB @ 1625 nm
